

Agentic AI Recruitment Manager — Quick Cheat-Sheet

Project: indexes candidate resumes, embeds locally, retrieves via Chroma, optional OpenAI explanations, exposes FastAPI endpoints.

Quick commands

- Create venv & install:

...

```
python -m venv .venv
.venv\Scripts\activate
pip install -r requirements.txt
```

...

- Seed DB:

...

```
python scripts/seed_data.py
```

...

- Build vector index:

...

```
python scripts/build_vector_index.py
```

...

- Run API server:

...

```
uvicorn app.api.rag_api:app --reload --port 8000
```

...

- Example curl search:

...

```
curl -X POST http://localhost:8000/rag/search -H "Content-Type: application/json" \
-d '{"query":"Python backend engineer with FastAPI","top_k":3}'
```

...

Files of interest

- `app/services/rag\_service.py` — embeddings, Chroma index, retrieval, explanation logic.
- `app/api/rag\_api.py` — FastAPI endpoints `/rag/search` and `/rag/rebuild`.
- `scripts/build\_vector\_index.py` — index builder script.
- `scripts/seed\_data.py` — creates sample data and DB.
- `chroma\_db/` — local vector DB (ignored by `.gitignore`).
- `interview\_scheduler.db` — SQLite DB (consider removing from git).

Notes

- `OPENAI\_API\_KEY` optional — if missing, explanations return null and retrieval still works.
- Keep `token.json` and `.env` out of source control; they contain secrets.
